Printed on recycled paper with water-based ink.

The text of this book was composed in Adobe Garamond.
Composition by HBIS Marketing Enterprises, Box 4762, Clifton, NJ 07015.

Cover design: Ira Nirenberg and Diana Thornton.

Introduction	1
1. The Problem	5
2. Those We Leave Behind	11
3. A Brief History of Mathematics	21
Precounting and Primitive Counting	21
Number Systems	24
Zeroing in on Zero	28
Confusion with Fractions — An Ancient Dilemma	30
Money and Numeracy	31
The Golden Age of Greece and Mathematical Thought	35
Numeracy, the Dark Ages, and the Crusades	37
Numeracy and the New World	39
4. Numbers Count	51
A Hodgepodge of RBNs	55
The RBNs of Population and Food Production	57
Carbon Dioxide—an Unlikely Danger	60
The RBNs of Extinction	62
Health Care, NASA, and the Military	64
The National Debt	67
5. Nuts and Bolts	73
Playing with Pieces—A Look at Fractions	73
Percentage	77
Powers of Ten and Scientific Notation	82
Negative Exponents	87
Order of Magnitude	91

6. Three Problems — Diet, Inflation, and Taxes	95
Problem # 1 Fat from Fiction	95
Problem # 2 Inflation — or How to Compare Apples to Oranges	103
Problem # 3 A Taxing Situation	109
Measuring Energy	111
Calculating the Tax on Gasoline and Home Energy Fuel	112
Finding the Per Capita Tax	114
Looking a Little Deeper	115
7. Beyond Arithmetic	121
The Cartesian Coordinate System	125
Formulas and Data	128
Finding the Equation of a Trend Line	133
Finding the General Equation of a Trend Line	137
Functions	142
Exercises	144
8. When Linearity Isn't Enough	151
The Parabola as an Example of Nonlinearity	154
Life in the Exponential Lane	162
The Exponential Function	164
Epilogue	177
Appendix A	179
Appendix B	181
Appendix C	187
Footnotes	191
Bibliography	199
Index	203

Acknowledgements

Many people have been immensely helpful to me in completing this book. First and foremost I would like to thank John Rubino (publisher of *Vegetarian Traveler Magazine*), who was the first person to read the entire manuscript. His suggestions on structure, format and clarity were invaluable. He always had an encouraging word and a great big smile—two things every writer needs. A big heartfelt thanks to Steve Kellogg, who helped to convert this book from its original Cannon software format to the Mac environment. Frank Magnuson, a colleague and friend, and his wife Sand both read the edited manuscript and helped to fine tune the book and eliminate sources of confusion. Dot Doyle, of the *North Carolina School of Science and Math*, took time out during the middle of the school year to carefully read through much of the mathematics and convinced me to change the title of Chapter 7. Dana Dell Dorson (Vice-President of *Legislation in Support of Animals—LISA*) read the manuscript and offered sound suggestions and encouraging words. Marsha Knadle, a former colleague and valued friend, spent part of her vacation reading the manuscript and offered valuable insights. A big *thank you* to my dear friend Izzy Buckweitz for reading the manuscript and offering a layperson's point of view. I would also like to thank Alan Fensin for his time and many helpful hints. Additionally, the 102 people who were kind enough to take my survey (see Appendix B), helped greatly to determine the direction and focus of my writing. This work, however, would never have existed had it not been for the *New Orleans School System* which graciously consented to give me a year long

sabbatical.

I am also indebted to my sister Eileen Schram who read the manuscript, and read the manuscript, and read the manuscript..., and never once begrudgingly. She was instrumental in catching many a blooper and offering helpful suggestions. My sister is the eternal optimist and never doubted this work would be completed, which is more than I can say for myself! She is a wonderful sister and a great friend. A mega thank you to Ira Shore, who over a period of a year, taught a true tyro the basics of book publishing. He is responsible for typesetting the manuscript and getting it into camera ready form. I cannot thank him enough. More than anyone though, I thank my wife, Brenda, for reading the manuscript more times than any human being should be asked to read anything. Without her painstaking grammatical editing, her unwavering support, and her immeasurable patience, I could not have written this book. She has been a constant source of support and an intellectually challenging partner, who never let me get away with a vague sentence or an ill placed adjective. And lastly, our cat Fernie, whose passion for computer keyboards was a clear barometer for my tenacity and patience.

Clearly, many people have contributed technical and moral support. But it is the author who must take responsibility for any shortcomings this work may have.

Dedication

This book is dedicated to my mother, Sylvia Miller Nirenberg and my father, Harry M. Nirenberg. They are eternal proof that there are no substitutes for kind and loving parents.
